Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE ____ MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 12,14,15,17 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stevens et al (4937586) in view of Takizawa et al (4879570) and D'Hont.

Regarding Claims 12,14,15,17 and 18, Stevens et al show a plate transponder with a spiral, air-cored loop 46 and ferrite loop antenna 48 disposed on a common substrate 34. Only one magnetic core antenna is shown where its axis is perpendicular to the air core loop antenna 46. Thus, Takizawa et al are cited as evidence of obviousness and as resolving the level of ordinary skill in the antenna art and shows a plurality of magnetic core antennas, where at least two antennas are perpendicular to each other. It would have been obvious to the skilled artisan to pluralize the single magnetic core antenna of Stevens et al according to Takizawa et al in order to provide omnidirectional coverage. Further, it would have been obvious to employ the magnetic core antenna of D'Hont in the primary reference devices for the purpose of improving efficiency by reducing eddy currents.
